Italian cosmetics for well-being

Regulation (EU) 2023/998 on the general safety of products "GPSR"

Given that the cosmetics sector is in fact regulated at European level by EU Regulation 1223/2009 and its subsequent regulatory provisions, which contain the same objectives set out in the regulation in question on product safety, the application of which starts on 13 December 2024, no obligations other than those already in place and implemented by M.MAGI SRL are foreseen.

However, M.MAGI SRL wishes to point out and recommend:

- **The most** effective way to check the quality of a cosmetic product and your individual safety is to read the list of ingredients on the label. The description of the components is done following an international standard: the INCI (International Nomenclature of Cosmetic Ingredients).
- **Carefully** read the indications and instructions printed on the package, on any leaflet, on any manual for use by the beauty operator, or on the website www.mmagi.it.
- **Professional** product for body treatment in Kit, which includes three different products:
 - Activator gel-cream in a PE airless 50 ml to be used first;
 - Body massage cream in PE tube 250 ml with safety cap to be used after the Activator;
 - Active body mask in PE tube 250 ml with safety cap to be used after the Massage Cream.
- **Perform** a simple test before using the products on the body, especially for the most sensitive subjects. Try the three components of the treatment in succession on a small portion of skin of the forearm, and wait the following 24 hours to see if there are any allergic reactions. If no reactions occur within 24 hours, the product can be used without problems. If there is any reaction, other than a slight redness (typical of the action carried out by the product) which will disappear in a short time, do not use the product.
- **Use** the product on healthy skin, it should never be used on damaged skin such as wounds, burns or abrasions.
- **External** use for exclusive professional use by personnel qualified in the aesthetic profession, who based on their science, knowledge and experience are able to use it in the right and correct manner on an audience of adults: keep out of reach of children.
- The Activator is applied and left on the area to be treated and massaged until completely absorbed, this prepares the skin to best receive the benefits of the subsequent massage.
- Special massage cream, the massage performed is both traditional and with a rubbery effect. In fact, the massage operator, thanks to the sticky effect of the product, sticks his/her hands alternately on the treated skin to obtain a vacuum effect, stimulating circulation. The sticky residues are cleaned with water or tonic before applying the next mask.
- Active Mask is spread on the treated area with a brush and left on for 10-15 minutes. Then remove everything with damp sponges.
- **Avoid or proceed** with extreme caution and attention, during the treatment, in the most delicate areas of the body.
- **If** the product should inadvertently come into contact with eyes and/or mucous membranes, rinse the affected area thoroughly with fresh water.
- **If** due to some incorrect maneuver the product should be inadvertently ingested, present yourself with the composition/ingredients of the product, printed on each primary or secondary package, to a poison center of a hospital. In the absence of hospitals, induce vomiting.
- **Do not** exceed the times and quantities of product to be applied, in relation to the type of skin, which are indicated.

Italian cosmetics for well-being

- **For** all three components of the treatment, take care to close the container well after use, so as not to create oxidation or contamination of the product.
- **For** all three components of the treatment, do not exceed, from the moment of opening the package, the time of use of the product indicated on the package by the PAO, of 6 months.
